

Final Project Introduction

NTU-DRL-MiniConf 2026

2026/05/11

From the largest AI conference (Neurips) to ACL, ICLR, ICML COLM, KDD, SIGIR ... What do they have in common?

Other than you get to visit these cities as a scholar

Not only you have to prepare a good and solid paper for submission

Also, you'll undergo a **double-blind paper review process**

**Only accepted paper will have the chance to go
and present your paper**

Decision
NeurIPS 2025 poster Recommendation: Accept (poster) Read
Submitted to NeurIPS 2025 Recommendation: Reject Read

What do we want to do in Final Project ?

- We want to let everyone be familiar with
 - Doing RL research
 - Writing research paper
 - Participate in the RL conference review process

- **Scope**
 - Topics related to DRL. The topic should not be existing work
 - DRL should be the primary focus and contributions of your project, not CV, NLP, or other subjects
- **Mini Conference Format**

• Author Score (30%) • Your project quality based on peer reviews and rebuttals	Submission deadline 5/25/2026, 23:59 PM
• Reviewer Score (10%) • Your review quality evaluated by TAs/instructor	Review deadline 5/29/2026, 23:59 PM
• Instructor Score (30%) • Technical assessment by TAs/instructor	Rebuttal deadline 6/1/2026, 23:59 PM
• Presentation Score (30%)	Discussion deadline 6/5/2026, 23:59 PM
	Decision notification 6/8/2026, 23:59 PM
- **Submission format:**
 - The final report has to be submitted in NeurIPS 2026 template, in English
 - 4-8 pages, using LaTeX (LaTeX source files should be submitted)
 - Clearly specify your motivation, novelty, and main contributions
 - The source codes. The results should be reproducible
 - Following this: <https://github.com/paperswithcode/releasing-research-code>

6/15/2026 in class (Top n% of the submissions) (n: TBD)

from Lecture 1 slide, p.5

What do we want to do in Final Project ?

- **We want to let everyone be familiar with**
 - Doing RL research
 - Writing research paper
 - Participate in the RL conference review process

=> Hence we doing a mini conference for this class

- **Scope**
 - Topics related to DRL. The topic should not be existing work
 - DRL should to be the primary focus and contributions of your project, not CV, NLP, or other subjects
- **Mini Conference Format**

• Author Score (30%) • Your project quality based on peer reviews and rebuttals	Submission deadline 5/25/2026, 23:59 PM
• Reviewer Score (10%) • Your review quality evaluated by TAs/instructor	Review deadline 5/29/2026, 23:59 PM
• Instructor Score (30%) • Technical assessment by TAs/instructor	Rebuttal deadline 6/1/2026, 23:59 PM
• Presentation Score (30%)	Discussion deadline 6/5/2026, 23:59 PM
	Decision notification 6/8/2026, 23:59 PM
- **Submission format:**
 - The final report has to be submitted in NeurIPS 2026 template, in English
 - 4-8 pages, using LaTeX (LaTeX source files should be submitted)
 - Clearly specify your motivation, novelty, and main contributions
 - The source codes. The results should be reproducible
 - Following this: <https://github.com/paperswithcode/releasing-research-code>

6/15/2026 in class (Top n% of the submissions) (n: TBD)

from Lecture 1 slide, p.5

What do we want to do in Final Project ?

- **Every student (team) will go through ...**
 - Find a novel research topic
 - Write a paper for your project
 - Submit your paper, and engage in double-blind peer review (review / rebuttal / discussion)
 - Attend the conference (oral / poster session)

- **Scope**
 - Topics related to DRL. The topic should not be existing work
 - DRL should be the primary focus and contributions of your project, not CV, NLP, or other subjects
- **Mini Conference Format**

• Author Score (30%) • Your project quality based on peer reviews and rebuttals	Submission deadline 5/25/2026, 23:59 PM
• Reviewer Score (10%) • Your review quality evaluated by TAs/instructor	Review deadline 5/29/2026, 23:59 PM
• Instructor Score (30%) • Technical assessment by TAs/instructor	Rebuttal deadline 6/1/2026, 23:59 PM
• Presentation Score (30%)	Discussion deadline 6/5/2026, 23:59 PM
	Decision notification 6/8/2026, 23:59 PM

6/15/2026 in class (Top n% of the submissions) (n: TBD)
- **Submission format:**
 - The final report has to be submitted in NeurIPS 2026 template, in English
 - 4-8 pages, using LaTeX (LaTeX source files should be submitted)
 - Clearly specify your motivation, novelty, and main contributions
 - The source codes. The results should be reproducible
 - Following this: <https://github.com/paperswithcode/releasing-research-code>

from Lecture 1 slide, p.5

 - Clearly specify your motivation, novelty, and main contributions
 - The source codes. The results should be reproducible
 - Following this: <https://github.com/paperswithcode/releasing-research-code>

from Lecture 1 slide, p.5

Topic Limitation

1. We encourage **ANY** RL-focused topics with novel contributions.
2. Projects must demonstrate clear RL methodology and innovation.
3. Please **AVOID** existing work replication and survey papers.

Important Dates for Paper Submissions

Come up with an idea, construct your work (run experiments, write paper, ...) and submit your paper

- **05/15: Deadline for group registration**

- Find your teammates, 3 ~ 5 people a team, see this [Google forum](#) for more detail
- Each student should register an [OpenReview](#) account for later submission
 - Please **use academic / institution email** (i.e., your NTU cool email) so the account can be activate automatically
 - Non-institution account can take **up to 2 weeks** to activate (which may miss the deadline)

- **05/25, 23:59 PM: Submission Deadline**

- Each team should **submit a paper** on the [venue page](#)

Important Dates for Double-Blind Peer Review

After your work is submitted, you will engage in the double-blind peer review process

- **05/29, 23:59 PM: Review Deadline**
 - Each student will be required to review and score a paper (each paper will receive 3 reviews)
- **06/01, 23:59 PM: Rebuttal Deadline**
 - Authors should respond and address reviewer's feedback and concerns
- **06/05, 23:59 PM: Discussion Deadline**
 - Authors and reviewers can now actively discuss and clarify the submitted rebuttal
 - Reviewers can raise their score if they think their concerns have been resolved
- **06/08, 23:59 PM: Decision Notification**
 - An Area chair (TA) will then review if 3 reviewers do a proper work and give the final decision
 - We assume all papers will be accepted, but only top N% will be oral, others will be poster

Scoring

1. Base Scores (100%)

a. Author Score (25%)

- i. Your project quality based on peer reviews and rebuttals
- ii. Based on the “Workload Distribution” section in your paper

b. Reviewer Score (25%)

- i. Your review quality evaluated by Area Chairs (TAs)

c. Instructor Score (25%)

- i. Technical assessment by Instructor

d. Presentation (25%)

- i. Based on the in-class presentation (Oral) and poster session (Poster) at 6/15

2. Bonus Scores

a. Oral Papers (10%)

b. We will select one paper to receive Best Paper Award (N%, TBD)

Submission Guide

How to submit a Paper ?

1. Join the conference submission

- This should be done after **every teammates** having an openreview account
- Go to the [Venue home page](#)
- Click the add submission button

2. Fill out the Submission Form

- Each team should have only **one representative** to submit your work , and add all other teammates through the **email** used for openreview registration at the “Authors” field
- Upload your paper through the “Choose PDF” button

Submission Requirements (Format of PDF)

1. The PDF submission format

- should be written in **LaTeX and English**, and follow the [NeurIPS 2026 template](#)
- 4~8 pages for main content** (excluding references and unlimited appendices)
- We recommend to use [OverLeaf](#) to write your paper, as it can easily import the template, and easily activate/disable anonymous mode for paper submission. You can also use Word to write your paper, just make sure your format is correct

2. The submission must be **anonymous**

- Anonymous meaning no mention of your name (as we will do double-blind review)
- Line number should be visible
- The entire paper should not contain any external links which will reveal your identity
- The final submitted paper should look something like [this](#)

Clear Minds Think Alike: What Makes LLM Fine-tuning Robust? A Study of Token Perplexity

Anonymous Author(s)
Affiliation
Address
email

Abstract

1 Maintaining consistent model performance across domains is a fundamental chal-
2 lenge in machine learning. While recent work has explored using LLM-generated
3 data for fine-tuning, its impact on cross-domain generalization remains poorly
4 understood. In this paper, we present a systematic analysis revealing that fine-
5 tuning with LLM-generated data not only improves target task performance but
6 also reduces out-of-domain (OOD) degradation compared to fine-tuning with

What do you need to contain in your paper ?

Your paper should clearly specify motivation, novelty, and main contributions. Below is a example paper structure for reference, see “**How to Write a Great Research Paper** ([youtube](#), [pdf](#))” for more guidance.

1. Abstract

2. Introduction

- a. High level go through this paper, including your motivation, observation, and contribution
- b. What problem do you address? Why the problem is interesting/important?

3. Related work

- a. Discuss related research to your work and explain the similarity and difference of your work from them.

4. Methodology

- a. Describe in detail how you solve your problem or conduct your study
- b. Discuss any challenge that you encountered and how you solved

5. Experiments

- a. including main experiments, ablation studies, discussions that prove the effectiveness of your method

6. Conclusion

7. Member Workload (**only provide in camera ready version**)

8. References

9. Appendencies (optional, if needed)

Review Guide

What does a reviewer need to do ?

After reading the paper ... you'll required to:

1. Write summary of the paper
 - Brief summary of your review
2. Write Strengths and Weaknesses of the paper
 - Please provide an evaluation of the **quality**, **clarity**, **originality** and **significance** of this work, including a list of its pros and cons
3. Score this paper (1 ~ 6)
 - 1 (strong reject), 2 (reject), 3 (borderline reject)
 - 4 (borderline accept), 5 (accept), 6 (strong accept)
4. Give the confidence of your rating (1 ~ 5)
 - 1 (educated guess), 2 (somewhat uncertain), 3 (fairly confident),
 - 4 (confident but not absolute certain), 5 (absolute certain)

Here is a [review / rebuttal example](#) from past ICLR venue (as ICLR will public all reviews)

How to write clear review

Your review should be structured and concise but most importantly be nice to the author. If there's major flaws (such as incorrect equation) and minor flaws such as typo error, experiments is not robust. Please split your issues into major and minor section.

Also when multiple questions are present, please use numerical list for all your issues to address please use the word "question" to refer in their rebuttal.

Major:

1. How does the method compare to simpler alternatives like confidence-
2. Can you provide analysis of actual error types detected versus false pos
3. What are the anomaly thresholds δ , alpha and beta used in all experim
4. Any potential computational overhead to find this threshold?

Minor:

5. Is there any representation feature learned via reconstruction loss and
6. Would using a stronger LLM as a detector yield better results?
7. Why is the batch size not provided in Appendix B, Table 5?
8. What was the logic behind the bold average for the MASC score? MASC

How to write clear review

Your review should be structured and concise but most importantly be nice to the author. If there's major flaws (such as incorrect equation) and minor flaws such as typo error, experiments is not robust. Please split your issues into major and minor section.

Also when multiple questions / issues you wish the author to address please use numerical list for all your questions. The author would be easier to refer in their rebuttal.

Any Questions ?

We will have an [NTU Cool Discussions](#) for questions regarding the Final Project

Please post your questions there, as they may be relevant to others
